Reference

Hereby we confirm, that Testberries has been using the TimeCamp system for tracking and collecting its employees' work time data.

We are extremely satisfied with the functionality of the application as it has given us the possibility to precisely track down where the most time is used. After the first weeks of using the Timecamp system we were able to sit down together and analyse the productivity of each employee. From that moment on we were able to increase the productivity of the team as we no longer spend time on tasks / applications / web sites that do not contribute to the overall outcome of our daily tasks.

The application has a very nice, user friendly interface and gives the users the chance to accurately interpret the collected data with the help of multiple graphs. It takes almost no time to install and start using TimeCamp and we feel that one benefits from the very beginning of using it.

We would like to recommend TimeCamp for all the companies and individuals who are looking for a functional and easy to use tool for collecting work time data for further processing.
